

Daily Economic Intelligence Report

Date: 2026-06-20 | Generated: 2026-06-20 18:43:01 JST | Confidence: High

1. Executive Summary

- S&P 500 rose 1.08% on the session.
- 10Y-2Y yield spread is +29 bps (positive). Fed Funds: 3.63%.
- Gold at \$4,173/oz (YTD: -3.28%).

2. Key Indicators Dashboard

Indicator	Value	1D Change	YTD Change	As Of
Fed Funds Rate	3.63	+0.0 bps	-1.0 bps	2026-06-17
10Y Treasury Yield	4.49	+6.0 bps	+30.0 bps	2026-06-17
2Y Treasury Yield	4.20	+15.0 bps	+73.0 bps	2026-06-17
10Y Real Yield (TIPS)	2.23	+9.0 bps	+29.0 bps	2026-06-17
ECB Deposit Rate	2.25	+0.0 bps	+25.0 bps	2026-06-19
BOJ Short-Term Rate	0.73	+0.0 bps	-0.1 bps	2026-05-01
S&P 500	7,500.58	+1.08%	+9.36%	2026-06-18
NASDAQ 100	30,406.19	+2.48%	+20.63%	2026-06-18
Nikkei 225	71,250.06	+0.28%	+37.46%	2026-06-19
Hang Seng	23,924.81	-1.59%	-9.16%	2026-06-18
DXY Index	100.85	-0.00%	+2.47%	2026-06-19
USD/JPY	161.27	-0.01%	+2.90%	2026-06-20
EUR/USD	1.15	-0.33%	-2.39%	2026-06-19
Gold	4,172.90	-1.21%	-3.28%	2026-06-19
WTI Crude	76.54	-0.08%	+33.53%	2026-06-19
Bitcoin	63,644.23	+0.16%	-28.27%	2026-06-20
Ethereum	1,727.28	+0.95%	-42.43%	2026-06-20
BTC Funding Rate (perp)	+0.0026%	-0.3 bps	N/A	2026-06-20
ETH Funding Rate (perp)	+0.0032%	+0.1 bps	N/A	2026-06-20
BTC Open Interest (USD)	\$6.2B	-0.03%	-21.23% (30D)	2026-06-20
ETH Open Interest (USD)	\$3.8B	-1.59%	-19.28% (30D)	2026-06-20
BTC Long/Short Ratio	1.91	-1.41%	N/A	2026-06-20
ETH Long/Short Ratio	2.11	-3.85%	N/A	2026-06-20
BTC DVOL (implied vol)	40.4	-0.30%	N/A	2026-06-20
ETH DVOL (implied vol)	56.8	-0.65%	N/A	2026-06-20
Stablecoin Supply (total)	\$313.5B	+0.05%	N/A	2026-06-20
BTC Dominance	56.08%	N/A	N/A	2026-06-20
ETH/BTC Ratio	0.02716	N/A	N/A	2026-06-20

⚠ = data older than freshness threshold

3. Market Narrative

Risk Regime: Risk-On

Risk Regime: Risk-On. US equities advanced on the session: S&P 500 +1.08%, NASDAQ 100 outperformed at +2.48% (tech leading). Nikkei 225 +0.28% in Tokyo.

The Fed Funds rate stands at 3.63%, with the 10Y Treasury yield at 4.49% and the 2Y at 4.20%. The 10Y-2Y spread is +29 bps (mildly positive — limited inversion risk near-term). The ECB deposit rate is 2.25%.

DXY Dollar Index at 100.85. USD/JPY at 161.27 (JPY weak vs dollar). Gold at \$4,173/oz. WTI Crude at \$76.54/bbl. Bitcoin at \$63,644 (+0.16% on session).

Crypto Market Structure

Perp funding: BTC is neutral-to-mild (+0.003%/8h) — no extreme positioning; ETH at +0.003%/8h (Bybit cross-check Δ +0.24 bps — sources agree).

Open interest: BTC \$6.2B, ETH \$3.8B (-0.0% 1D).

Stablecoin liquidity: total supply \$313B, roughly flat (+0.10% WoW).

Context: BTC dominance 56.1%, BTC implied vol (DVOL) 40 — normal, BTC long/short ratio 1.91.

✂ **Watch for:** no extreme in funding, leverage, or liquidity — monitor for funding flipping sign or stablecoin supply turning, which usually leads the next directional move.

4. Chart Analysis

Chart 1: Major Equity Indices — 30-day normalized

What this chart shows:

Each index is normalized to 100 at the start of the 30-day window so you can compare *relative performance*, not absolute price. A line above 100 means the index is up since the period start. Diverging lines signal de-correlation — driven by different regional or sector factors.

Key Observations:

- **Nikkei 225:** +14.2% over 30 days (↑ outperforming)
- **NASDAQ 100:** +6.4% over 30 days (↑ outperforming)
- **S&P 500:** +2.2% over 30 days (↑ outperforming)
- **Hang Seng:** -10.1% over 30 days (↓ underperforming)
- **Divergence:** Nikkei 225 leads Hang Seng by 24.3 pts — significant de-correlation; regional/sector factors diverging

✂ **Watch for:** Nikkei 225 is the strongest performer over 30 days. If it begins to flatten while others continue rising, watch for rotation out of that market.

Chart 2: US Rates & Yields — 30-day trend

What this chart shows:

Three lines map the US interest rate curve: the **Fed Funds Rate** (overnight policy rate the Fed controls), the **10Y Treasury yield** (long-term borrowing cost and growth expectations proxy), and the **2Y yield** (near-term Fed rate path expectations). The gap between 10Y and 2Y is the **yield curve** — positive = normal (growth expected); negative = **inverted** (historically a recession warning 12-18 months ahead).

Key Observations:

- **Fed Funds Rate:** 3.63% — moderately restrictive
 - **10Y-2Y Spread:** +29 bps — near-flat — transition zone, watch direction
 - **10Y vs Fed Funds gap:** +0.86% (+86 bps) — market expects rates to stay elevated; 10Y above Fed Funds
 - **30-day 10Y direction:** +13 bps — yields rising = bond selloff / inflation concern or growth optimism
- ✂ **Watch for:** The 10Y yield at 4.49% is the key equity valuation lever. A break higher than this session's level would compress equity P/E multiples (higher discount rate = lower present value of future earnings).

Chart 3: Cross-Asset Performance Heatmap

What this chart shows:

Each **row** is an asset; each **column** is a timeframe (1D = today, 1W = rolling 7 days, YTD = year-to-date). **Green = gain, Red = loss** — darker color means larger magnitude. Reading *across a row*: is today's move consistent with the longer trend? Reading *down a column*: which assets lead or lag on that timeframe? Assets are grouped: Equities → FX → Commodities → Crypto.

Key Observations:

- **1D session tone:** 8 assets green vs 6 red (mixed / transitional)
 - **Best YTD:** Nikkei 225 at +37.5% — momentum intact (also green 1D)
 - **Worst YTD:** Ethereum at -42.4% — underperforming on the year; check if 1D is also red (trend continuing) or green (potential stabilization)
 - **Risk signal:** S&P 500 up (+1.08%) while Gold down (-1.21%) — classic clean risk-on; capital rotating from safe haven to equities
 - **USD/JPY at 161.27:** Yen is weak vs dollar — JPY carry trades active. A sudden JPY strengthening (USD/JPY falling rapidly) can cause forced carry-unwind and sharp cross-asset selloff
 - **Crypto correlation:** BTC (+0.16%) vs S&P 500 (+1.08%) — diverging from equities — crypto-specific catalysts may be at play
- ✂ **Watch for:** Ethereum is down -42.4% YTD — if it starts showing consistent 1D green sessions, that is a potential mean-reversion trade setup.

Chart 4: Crypto Derivatives — Funding & Open Interest

What this chart shows:

Top panel: **perp funding rate** (BTC & ETH) — the recurring payment between longs and shorts. Positive = longs pay shorts (bullish-crowded); negative = shorts pay longs (bearish-crowded). Bottom panel: **open interest** — total notional in open perp positions; rising OI = new leverage entering, falling OI = positions closing. Read together: rising price + rising OI + positive funding = leverage-driven, squeeze-prone rally; rising price + falling OI = spot-led and healthier.

Key Observations:

- **BTC funding:** +0.003%/8h — balanced positioning; ETH +0.003%/8h
 - **Open interest:** BTC \$6.2B, ETH \$3.8B (BTC -0.0% 1D, -21.23% 30D)
 - **Long/Short account ratio:** BTC 1.91, ETH 2.11 — >1 = more accounts net-long (retail positioning skew)
- ✂ **Watch for:** Watch for funding flipping sign or OI spiking while price stalls — both often precede liquidation cascades.

Chart 5: Crypto Liquidity & Volatility

What this chart shows:

Top panel: **total stablecoin supply** — the dry-powder liquidity sitting on exchanges and in wallets, ready to rotate into risk assets. Its *direction* matters more than its level: rising supply = fresh capital entering the system (a tailwind for risk-on continuation); falling supply = capital leaving (a headwind that makes breakouts prone to failure). Bottom panel: **DVOL** — Deribit's crypto implied-volatility index, the crypto-native analogue of the equity VIX. Low DVOL = calm/complacency (often precedes a volatility expansion); high DVOL = stress/fear (often near capitulation). Dashed lines mark the compressed (40) and elevated (60) regime thresholds.

Key Observations:

- **Stablecoin supply:** \$313B, roughly flat (+0.10% WoW) — liquidity steady
- **DVOL (implied vol):** BTC 40 — normal; ETH 57 (BTC -0.3% 1D)

✂ **Watch for:** Track stablecoin direction (liquidity) against DVOL (vol regime) — a turn in either typically leads the next sustained move.

5. Forward Calendar (Next 14 Days)

Date	Event	Importance
2026-06-25	Personal Income & Outlays (PCE inflation)	High
2026-06-25	Gross Domestic Product (GDP)	High
2026-07-02	Employment Situation (NFP + Unemployment)	High

6. Data Confidence & Limitations

Overall Confidence: **High**

- All sources clean — no flags raised.

7. Key Takeaways — What Matters Today

- **Risk regime is Risk-On.** 8 of 14 tracked assets closed higher; S&P 500 +1.08% on the session.

- **Biggest 1D movers:** NASDAQ 100 +2.48% led gains; Hang Seng -1.59% led declines.
- **Rates:** Fed Funds at 3.63%, 10Y 4.49% / 2Y 4.20% — 10Y-2Y spread +29 bps, modestly positive (normal).
- **Year-to-date:** Nikkei 225 leads at +37.5%, while Ethereum lags at -42.4%.
- **Cross-asset signal:** equities up while gold fell — clean risk-on rotation out of safe havens.
- **Next catalyst:** Personal Income & Outlays (PCE inflation) on 2026-06-25, plus 2 more high-impact release(s) within the horizon — expect volatility around the print.
