3. Market Narrative

Risk Regime: Risk-On

Risk Regime: Risk-On. US equities advanced on the session: S&P 500 +1.48%, NASDAQ 100 outperformed at +2.46% (tech leading). Nikkei 225 +4.99% in Tokyo.

The Fed Funds rate stands at 3.62%, with the 10Y Treasury yield at 4.45% and the 2Y at 4.05%. The 10Y-2Y spread is +40 bps (mildly positive — limited inversion risk near-term). The ECB deposit rate is 2.00%.

DXY Dollar Index at 99.47. USD/JPY at 160.07 (JPY weak vs dollar). Gold at \$4,385/oz. WTI Crude at \$80.10/bbl. Bitcoin at \$66,489 (+1.18% on session).

4. Chart Analysis

Chart 1: Major Equity Indices — 30-day normalized

What this chart shows:

Each index is normalized to 100 at the start of the 30-day window so you can compare *relative performance*, not absolute price. A line above 100 means the index is up since the period start. Diverging lines signal de-correlation — driven by different regional or sector factors.

Key Observations:

- **Nikkei 225:** +16.9% over 30 days (↑ outperforming)
- **NASDAQ 100:** +9.8% over 30 days (↑ outperforming)
- **S&P 500:** +4.7% over 30 days (↑ outperforming)
- **Hang Seng:** -4.8% over 30 days (↓ underperforming)
- **Divergence:** Nikkei 225 leads Hang Seng by 21.7 pts — significant de-correlation; regional/sector factors diverging

✂ **Watch for:** Nikkei 225 is the strongest performer over 30 days. If it begins to flatten while others continue rising, watch for rotation out of that market.

Chart 2: US Rates & Yields — 30-day trend

What this chart shows:

Three lines map the US interest rate curve: the **Fed Funds Rate** (overnight policy rate the Fed controls), the **10Y Treasury yield** (long-term borrowing cost and growth expectations proxy), and the **2Y yield** (near-term Fed rate path expectations). The gap between 10Y and 2Y is the **yield curve** — positive = normal (growth expected); negative = **inverted** (historically a recession warning 12-18 months ahead).

Key Observations:

- **Fed Funds Rate:** 3.62% — moderately restrictive
- **10Y-2Y Spread:** +40 bps — modestly positive — mild growth optimism
- **10Y vs Fed Funds gap:** +0.83% (+83 bps) — market expects rates to stay elevated; 10Y above Fed Funds
- **30-day 10Y direction:** +5 bps — yields stable — no major repricing

✂ **Watch for:** The 10Y yield at 4.45% is the key equity valuation lever. A break higher than this session's level would compress equity P/E multiples (higher discount rate = lower present value of future earnings).

Chart 3: Cross-Asset Performance Heatmap

Cross-Asset Performance Heatmap			
	1D	1W	YTD
S&P 500	+1.5%	+1.8%	+10.0%
NASDAQ 100	+2.5%	+3.2%	+20.5%
Nikkei 225	+5.0%	+8.3%	+33.7%
Hang Seng	+0.5%	+0.8%	-5.7%
DXY Index	-0.3%	-0.6%	+1.1%
USD/JPY	-0.8%	-0.2%	+2.1%
EUR/USD	+0.5%	+0.8%	-1.1%
Gold	+4.0%	+1.1%	+1.8%
WTI Crude	-5.6%	-12.3%	+39.7%
Bitcoin	+1.2%	+8.2%	-25.1%
Ethereum	+5.1%	+11.9%	-39.6%

What this chart shows:

Each **row** is an asset; each **column** is a timeframe (1D = today, 1W = rolling 7 days, YTD = year-to-date). **Green = gain, Red = loss** — darker color means larger magnitude. Reading *across a row*: is today's move consistent with the longer trend? Reading *down a column*: which assets lead or lag on that timeframe? Assets are grouped: Equities → FX → Commodities → Crypto.

Key Observations:

- **1D session tone:** 8 assets green vs 3 red (broadly Risk-On)
- **Best YTD:** WTI Crude at +39.7% — watch for momentum fade
- **Worst YTD:** Ethereum at -39.6% — underperforming on the year; check if 1D is also red (trend continuing) or green (potential stabilization)
- **Risk signal:** Both S&P 500 (+1.48%) and Gold (+4.04%) are green — this combination signals macro uncertainty rather than clean risk-on (investors buying both growth AND safety)
- **USD/JPY at 160.07:** Yen is weak vs dollar — JPY carry trades active. A sudden JPY strengthening (USD/JPY falling rapidly) can cause forced carry-unwind and sharp cross-asset selloff
- **Crypto correlation:** BTC (+1.18%) vs S&P 500 (+1.48%) — moving in-step with equities (correlated risk-on/off)

✂ **Watch for:** Both equities and gold advancing — this macro-uncertainty pattern tends to resolve: watch which breaks first. Ethereum is down -39.6% YTD — if it starts showing consistent 1D green sessions, that is a potential mean-reversion trade setup.
